

- 1) the problems you encountered  
It is very hard to figure out how classpath works. Hope professor can explain more about this. It's hard to run junit test when we incorporate a package name.
- 2) what parts of your program work correctly  
Everything. I am not sure if my program will run successfully on graders' computers, but it runs on mine.
- 3) Suggestions to the grader on how your program may be tested for partial credit consideration.  
If the program cannot find input file, please specify the absolute path. (Normally you don't need to do this if you put input files under input/ directory and follow the readme to run main.)
